Semester: VII
Academic Year: 2025-26
Class / Branch: BE IT-C
Subject: Recent Open Source Lab
Name of Instructor: Prof. Sachin Kasare

Name of Student: Shreya Sonawale
Student ID: 23104134

EXPERIMENT NO. 04

Aim: To examine various open-source quality assurance tools like Selenium, Katalon, Cucumber and identify steps for maintaining quality using Selenium.

1. Basic Demo :Automating a Google Search

Set up the environment using Python Code Example:

```
# Import Selenium WebDriver
from selenium import webdriver
from selenium.webdriver.common.keys import Keys

# Set up WebDriver (Chrome in this case)
driver = webdriver.Chrome()

# Open Google
driver.get("https://www.google.com")

# Print page title
print(f"Page title: {driver.title}")

# Find the search box element using its name attribute value
search_box = driver.find_element("name", "q") # Check area-label

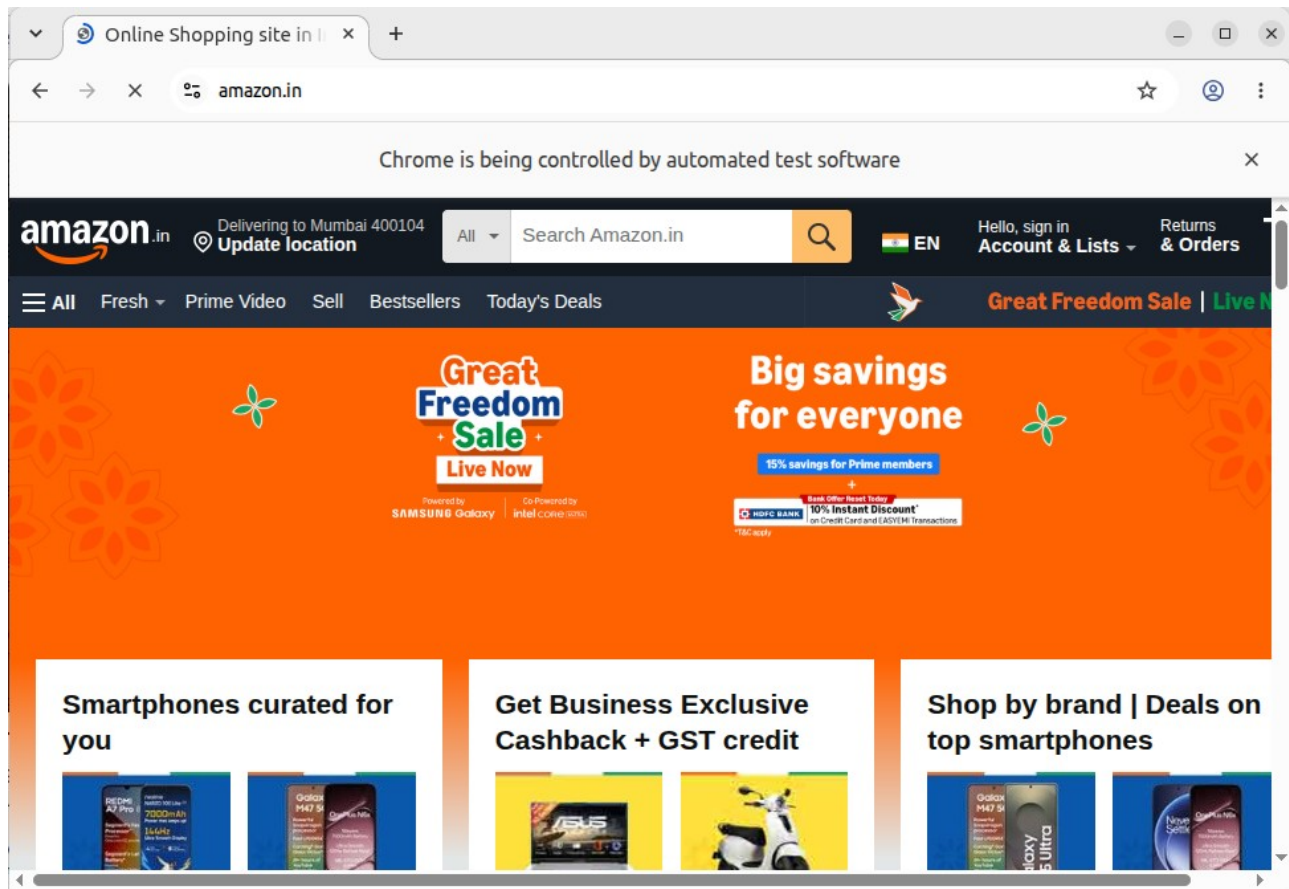

# Type a query into the search box
search_box.send_keys("Selenium WebDriver demo")

# Simulate pressing Enter
search_box.send_keys(Keys.RETURN)

# Wait for the results page to load and display the results
driver.implicitly_wait(5)

# Print the title of the new page
print(f"New Page title: {driver.title}")

# Close the browser
driver.quit()
```

```
apsit@apsit-HP-280-G3-MT:~/Downloads$ python3 Exp4.py
Page title: Google
New Page title: Google
```

See the Automation in Action:

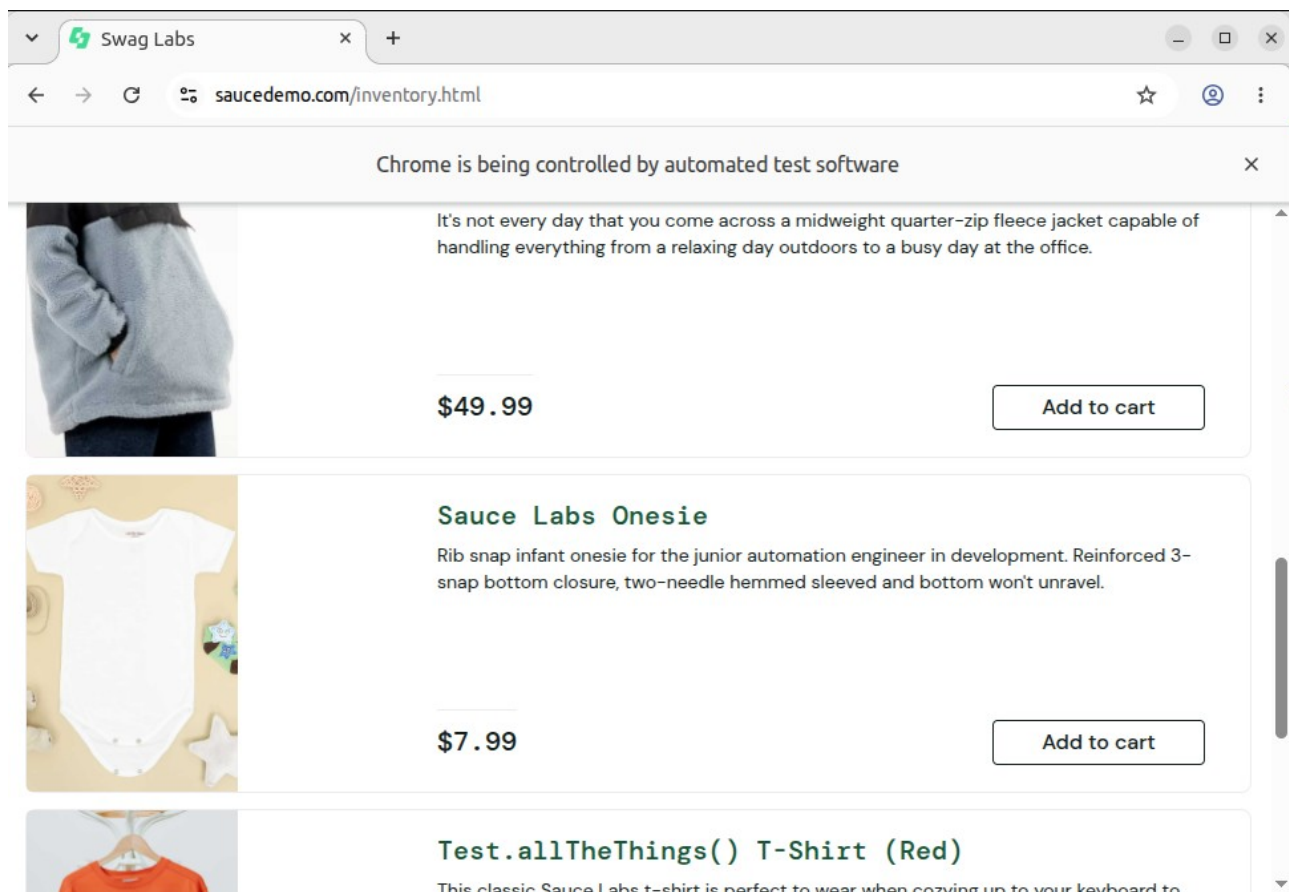

- Run the script, and it will automatically open a Chrome browser, search for "Selenium WebDriver demo" on Google, and print the page titles before and after the search.

Demo 2: Automating a Form on a Website (Example: A login form)

```
#Importing Selenium WebDriver
from selenium import webdriver
from selenium.webdriver.common.keys import Keys
from selenium.webdriver.common.by import By
import time
driver = webdriver.Chrome()
driver.get("https://www.saucedemo.com/")
username = driver.find_element(By.NAME, "user-name") # You may have to replace
```

```
'username' with the actual field name on the site
password = driver.find_element(By.NAME, "password") # Replace 'password' with the
actual field name
username.send_keys("standard_user") # A dummy username
password.send_keys("secret_sauce") # A dummy password
submit_button = driver.find_element(By.NAME, "login-button")
submit_button.click()
time.sleep(3) # Wait for 3 seconds for the next page to load
try:
    success_message = driver.find_element(By.ID, "success-message") # Replace with
the actual element's ID
    print(f"Login successful: {success_message.text}")
except:
    print("Login failed or success message not found")
driver.quit()
```

```
apsit@apsit-HP-280-G3-MT:~/Downloads$ python3 Exp4_1.py
Login failed or success message not found
```
