Monitor and control.
The classroom is yours.

With Veyon you always have full control over your classroom. You can see all computer screens in an icon view and access individual computers with just one click. Taking screenshots of computers is a one-click operation as well. Draw attention to your lesson by locking all computers and blocking input devices with

The following features are available in Veyon:

- Overview: monitor all computers in one or multiple locations or classrooms
- Remote access: view or control computers to watch and support users
- Demo: broadcast the teacher's screen in realtime (fullscreen/window)
- Screen lock: draw attention to what matters right now
- Communication: send text messages to students
- Start and end lessons: log in and log out users all at once
- Screenshots: record learning progress and document infringements
- Programs & websites: launch programs and open website URLs remotely
- Teaching material: distribute and open documents, images and videos easily
- Administration: power on/off and reboot computers .

Output:

Conclusion:

We've listed common reasons why people contribute to OSS projects, and described various ways to get started.
